| Prob. 01

Suppose the current measurements in a strip of wire are assumed to follow a **normal distribution** with a **mean of 10** milliamperes and a **variance of 4**.

- What is the probability that a measurement will **exceed 13 milliamperes**?

| Prob. 02

Suppose the current measurements in a strip of wire are assumed to follow a **normal distribution** with a **mean of 10** milliamperes and a **variance of 4**.

- What is the probability that a current measurement is between 9 and 11 milliamperes?

| Prob. 03

Suppose the current measurements in a strip of wire are assumed to follow a **normal distribution** with a **mean of 10** milliamperes and a **variance of 4**.

- What is the probability that a current measurement is between 8 and 12 milliamperes?
